Bachelor of Computer Application

(B.C.A.) [Self-Financed]

CERTIFICATE

This is to certify that POTHYAWALA ZEBA RAFIQUEBHAI (Exam No. 793) has successfully completed her project entitled Ocean Tour as a partial fulfillment of the 6th semester required for the degree of "Bachelor of Computer Application (B.C.A.)" for the academic year 2022-2023.

Place: Surat
Date : 20/04/2023

*Dr. B. C. Patel
Incharge Principal*

*Smt. Tanuben & Dr. Manubhai Trivedi
College of Information Science, Surat.*

Acknowledgement

Accomplishment requires the effort of many people and this work is no different. As we stride towards the completion of our 6th semester training project, We Would like to grab this opportunity to express our deep sense of gratitude towards each and every institution and person who knowingly was part of this project and contributed to its success.

Also, we would like to express our heartfelt gratitude towards our internal guide **Prof. Dhirendra N. Tandel** for him invaluable help, critical suggestions and key directions throughout the course of the project. His in-depth knowledge and experience have always been a constant source of inspiration.

We take rather special privilege of thanking our Respected B.O.D. Prof. Bharat Patel & all the faculties for making the resource available within the institute for the project work.

Our special thanks go to our parents, friends, colleagues, batch mates and well-wishers for providing the much-needed supports and constant motivation for working dedicatedly over this project. Finally, we would like to especially thanks all those who contributed directly or indirectly to the accomplishment of this project in some way or the others.

Thanking to all,

Zeba R. Pothiyawala

Ekta L. Thesiya

Ekta R. Kaneriya

**1. Project Profile**

Field	Description
Project Title:	Ocean Tour
Language:	PHP 5.3.4
Front – End:	PHP, HTML, JavaScript, jQuery, Ajax, CSS, Bootstrap
Back - End:	MySQL 5.1.53, PHP
Database:	MySQL
Documentation Tool:	Microsoft Office Word 2013 Edraw Max 6.8
Team Members:	3
Project Duration:	2 Months
Internal Guide:	Prof. Dhirendra N. Tandel
Name of College:	Smt. Tanuben & Dr. Manubhai Trivedi College of Information Science (B.C.A.)
Address of College:	Wadia Women's College Campus, Athwa Lines, Surat 395 001.
Submitted By:	Zeba R. Pothiyawala, Ekta R. Kaneriya, Ekta L. Thesiya

2. Objectives of System

The main objective of the application is to automate the existing system of issuing tickets at only select outlets to make available online, so each customer can book cruise tickets at his or her place.

Admin can able to handle whole system.

3. Project Category

- **Project Type**

Web based Application

- **Description**

- ❖ We are going to develop web application because all listed below are possible in it.
- ❖ Desktop application and Mobile application do not provide all the listed below.
- ❖ Unlike traditional applications, web systems are accessible anytime, anywhere and via any personal computer with an internet connection.
- ❖ With the web-based approach installation and maintenance become less complicated too.
- ❖ This application can be used by any cruise ship to issue the tickets to the customers.

4. Tools/Environment Used

Hardware and Software Used along with Purpose:

❖ **Server Side (Minimum): -**

Hardware Specification: -

- ❖ **Processor:** Intel Dual Core
- ❖ **RAM:** 128 MB
- ❖ **HDD:** 20 GB

Software Specification: -

- ❖ **Operating System:** Windows 10
- ❖ **Front End Tools:** PHP
- ❖ **Back End Tools:** MYSQL Server
- ❖ **Editor:** Notepad++, Dreamweaver

❖ **Client Side: -**

Software Specification: -

- ❖ **Front End Tools:** Google Chrome or Mozilla Firefox or Internet Explorer

❖ **Development Environment: -**

- PHP (5.3.5)
- Apache (2.2.17)
- MYSQL Server (5.5.8)

PHP:

♣ **What is PHP?**

- **DEFINITION:** PHP is a Widely-used general-purpose scripting language that is especially suited for web development and can be embedded into HTML.
- “PHP is a server-side, Cross –platform, HTML embedded scripting language.”
- **Server – side:** This means that PHP scripts execute on the Web server, not within the browser on your local machine.
- **Cross - platform:** Cross – platform means that PHP Scripts can run on many different operating systems and web servers. PHP is available for the two most popular web server configurations (IIS running on Windows NT and Apache running on UNIX).
- **HTML embedded scripting language:** This means that PHP statements and commands are actually embedded in your HTML documents. When the web server sees the PHP statements in the web page, the server executes the statements and sends the resulting output along with the rest of the HTML. PHP commands are parsed by the server much like Active Server Pages or Cold Fusion tags.
- ♣ The PHP Hypertext Preprocessor (PHP – yes, the first “P” in the acronym does indeed stands for PHP!) allows web developers to create dynamic content that interacts with databases. PHP applications are normally on Linux servers and in conjunction with MYSQL databases.
- ♣ It provides those servers with functionality similar to that provided to the windows platform by Active Server Pages technology.
- ♣ PHP stands for: Hypertext Preprocessor or Personal Home Page
- ♣ PHP is server-side scripting language.

- ♣ PHP scripts are executed on server.
- ♣ PHP supports many Databases (MYSQL, Informix, Oracle, Sybase, Solid, Postgre SQL, Generic ODBC, etc.)
- ♣ PHP is open source.
- ♣ PHP is free to download and use.

♣ **PHP Files:**

- PHP Files may contain text, HTML Tags and scripts.
- PHP files are returned to the browser as plain HTML.
- PHP files have a file extension of ".php", ".php3" or "phtml".

♣ **Why PHP?**

- PHP runs on different platforms (Windows, UNIX, LINUX, etc.).
- PHP is compatible with almost all servers used today (Apache, IIS, etc.).
- PHP is free to download from the official PHP resource: www.php.net
- PHP is easy to learn and runs efficiently on the server side.

♣ **Where to Start?**

- Install an Apache server on a Windows or Linux machine.
- Install PHP on a windows or Linux machine.
- Install MySQL on a Windows or Linux machine.

♣ **PHP Scripting:**

- PHP is now officially known as "PHP Hypertext "Preprocessor". It is a server-side scripting language usually written in an HTML context unlike an ordinary HTML page, a PHP script is not sent directly to a client by the server, instead, it is parsed by the PHP binary or module, which is server side installed.
- HTML elements in the script are left alone, but PHP code is interpreted and executed. PHP code in a script can query databases, create images, read and write files, talks to remote servers – possibilities are endless.

- The output from PHP code is combined with the HTML in the script and the result sent to the user's web – browsers, therefore it can never tell the user whether the web – server uses PHP or not, because all the browsers see it in HTML. PHP's support for Apache and MySQL further increases its popularity.
- Apache is now the most used web – server in the world, and PHP can be compiled as an Apache module. MySQL is a powerful free SQL database, and PHP provides a comprehensive API for Apache, MySQL and PHP is all but unbeatable.
- That does not mean that PHP cannot work in other environments or with other tools; in fact, PHP supports an extensive list of databases and web – servers. The rise in popularity of PHP has coincided with a change of approach in web – publishing. While in the mid -1990s it was ok to build static, even relatively large sites, with hundreds of individual hard-coded HTML pages, today's webmasters are making the most of the power of databases to manage their content more effectively and to personalize their sites according to individual users' preferences.

✿ Reasons for using PHP:

- There are some indisputable great reasons to work with PHP. As an open-source product, PHP is well supported by a talented production team and a committed user community. Furthermore, PHP can be run on all the major operating systems with most servers.
- The speed of development is also important. Because, PHP allows you to separate HTML code from scripted elements, you will note a significant decrease in development time on many projects. In many instances, you will be able to separate the coding stage of a project from the design and build stages. Not only can this make life easier for you as a programmer, but it also can remove obstacles that stand in the way of effective and flexible design.

✿ The Advantages of PHP:

- PHP is one of the most popular server-side scripting languages running today. It is used for creating dynamic web pages that interact with the user offering customized information.
- PHP offers many advantages, it is fast, stable, secure, easy to use and open-source PHP code is inserted directly into the HTML that makes up a website.

- When a visitor comes to the website, the code is executed. Because PHP is a server-side technology, the user does not need any special browser or plug – ins to see the PHP in action.
1. **PHP's Syntax** is very similar to C, Perl, ASP or JSP, for people who know either of these languages PHP is too easy.
 2. **Database Integration** PHP can be compiled with function to interact with lot of databases. PHP with MySQL is very popular combination. You can also write your wrap – around function to indirection call database function.
 3. **Extensibility** like mentioned before, PHP has been involving at rapid for a non – programmer it might be different to extend PHP to supports additional functions but for programs it should not be very different.
 4. **Object Oriented Programs** PHP Provides for classes and object supports for OOP's is sufficient enough for most programming task related to the web. PHP supports constructors, derived classes etc.
 5. **Scalability** traditionally, interactivity in web pages s into web server. achieved using CGI programs do not scale well, because each run of a program occurs as separate process. The solution is to compile the interpreters for language used to write CGI program.

❖ MySQL: -

❖ Overview of MySQL: -

MySQL is a Relational Database Management System (RDBMS) based on **SQL (Structured Query Language)**. MySQL is used in a wide range of applications, including data warehousing e-commerce, web databases, logging applications and **distributed** applications.

▲ MySQL is a database management system.

A database is a structured collection of data. It may be anything from a simple product list to picture gallery or the vast amounts of information in a corporate network.

▲ MySQL is a relational database management system.

A relational database stores data in separate tables rather than putting all the data in one big storeroom. This adds speed and flexibility. The SQL part of “MySQL” stands for “**Structured Query Language**”.

▲ MySQL software is open source.

Open source means that it is possible for anyone to use and modify the software. Anybody can download the MySQL software from the internet and use it without paying anything.

▲ The MySQL Database Server is very fast, reliable and easy to use.

MySQL server was originally developed to handle large database much faster than existing solutions and has been successfully used in highly demanding production environment for several years.

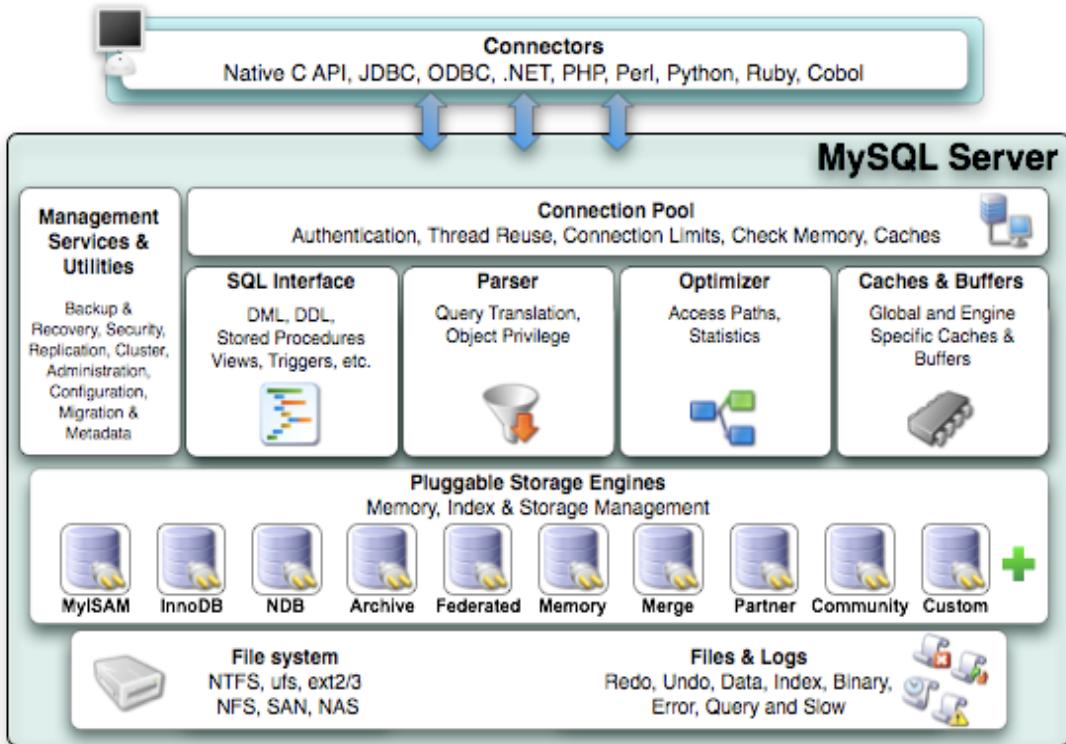

▲ MySQL Server works in client/server or embedded systems.

The MySQL Database Software is a client/server system that consists of multi-threaded SQL server that supports different back ends, several different client programs and libraries, administrative tools, and a wide range of **Application Programming Interfaces (APIs)**.

▲ A large amount of contributed MySQL software is available.

It is very likely that your favorite application or language supports the MySQL Database Server.

❖ MySQL Architecture with Pluggable Storage Engines

The pluggable storage engine architecture provides a standard set of management and support services that are common among all underlying storage engines. The storage engines themselves are the components of the database server that actually perform actions on the underlying data that is maintained at the physical server level.

This efficient and modular architecture provides huge benefits for those wishing to specifically target a particular application need—such as data warehousing, transaction processing, or high availability situations—while enjoying the advantage of utilizing a set of interfaces and services that are independent of any one storage engine.

The application programmer and DBA interact with the MySQL database through Connector APIs and service layers that are above the storage engines. If application changes bring about requirements that demand the underlying storage engine change, or that one or more storage engines be added to support new needs, no significant coding or process changes are required to make things work. The MySQL server architecture shields the application from the underlying complexity of the storage engine by presenting a consistent and easy-to-use API that applies across storage engines.

5. Analysis Reports

5.1 Current/Existing System

- ❖ Presently this company has ticket counters in some part of the city.
- ❖ Where people go to book the tickets or to check the timings. Also, there are many travel agents take the advance booking.
- ❖ In turn these agents will check out with the main ticket counter officials for the ticket's confirmation.
- ❖ This is very lengthy and tedious for the agents to book the tickets.

5.2 Drawbacks/Limitation of Current/Existing System

- ❖ Internet connection is compulsory.
- ❖ Time consuming.
- ❖ Large amount of paper work.

**5.3 Requirement Specification****5.3.1 System Requirement: -****♣ Admin: -**

Software:	Visual Studio Code 1.76.2 or any above version
Operating System:	Windows 11
Data Base:	MySQL
Microprocessor:	Any But Latest is good for performance
Memory:	1 GB
Hard Disk Space:	100 GB

♣ User: -

Software:	Visual Studio Code 1.76.2 or any above version
Operating System:	Windows 11
Data Base:	MySQL
Microprocessor:	Any But Latest is good for performance
Memory:	1 GB
Hard Disk Space:	100 GB

5.3.2 Module Specification: -

- Confidential data should be accessed securely by username and password. This web-application is secure for every kind it's users.
- Admin should manage all the users who are booking.
- Cruises, ships, cabin, deck, etc.. All the facilities should be managed.
- The cruise and ship packages should be managed.
- User can login, change password and logout to the system.
- The user should change their profile.
- Cruise, ship and other facilities should be created.
- The user should be able to search cruise and ship according to cruise line, cruise length, route.
- The user should be able to view their booking details.
- The user should be payments according to packages.
- feedbacks should be reviewed.
- Admin should manage all the types of facilities.
- Admin should search all the cruise, ship, route, country, state, city and all types of facilities.
- The database that is used should be robust, reliable and fast. So, users will have to wait for the output very short time.
- Better component design should be there to get better performance at peak time.
- There should be no case of redundancy in the database so it will not take extra memory space.
- User Authentication.

5.4 Proposed System

- ❖ The proposed system will be available online. So, anybody who are interested in checking the timings they can easily check. And also, they can book tickets online.

5.5 Advantages of Proposed System

- ❖ Managing and keeping records of all papers, books and the entire system in digital format.
- ❖ More exposure for people in the world of technology.
- ❖ In addition to user advantages, the cruise is able to take more orders with less staff.
- ❖ Accessible 24 hours, anywhere and everywhere

5.6 Data Flow Diagram, Process Specification and Data Dictionary

❖ Data Flow Diagram

The data flow diagrams are an intuitive way of showing how data is processed by a system. The symbols used in the DFD for this project are shown below.

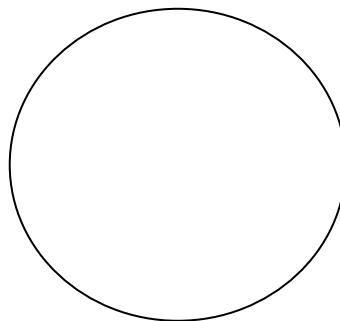

➤ DATA FLOW:

Following symbol is used to show data flow. The data flow is packet of data.

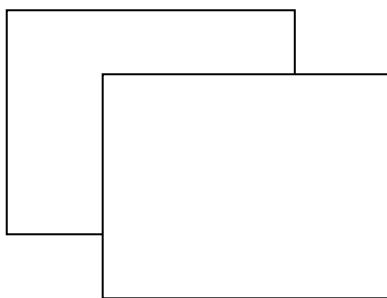

➤ PROCESSES:

People, procedures or devices that use or produce data.

➤ SOURCE OR DESTINATION OF DATA:

These are the entities, which interact with the system from outside its boundaries.

➤ DATA STORAGE:

Here data are stored or referenced process in the system.

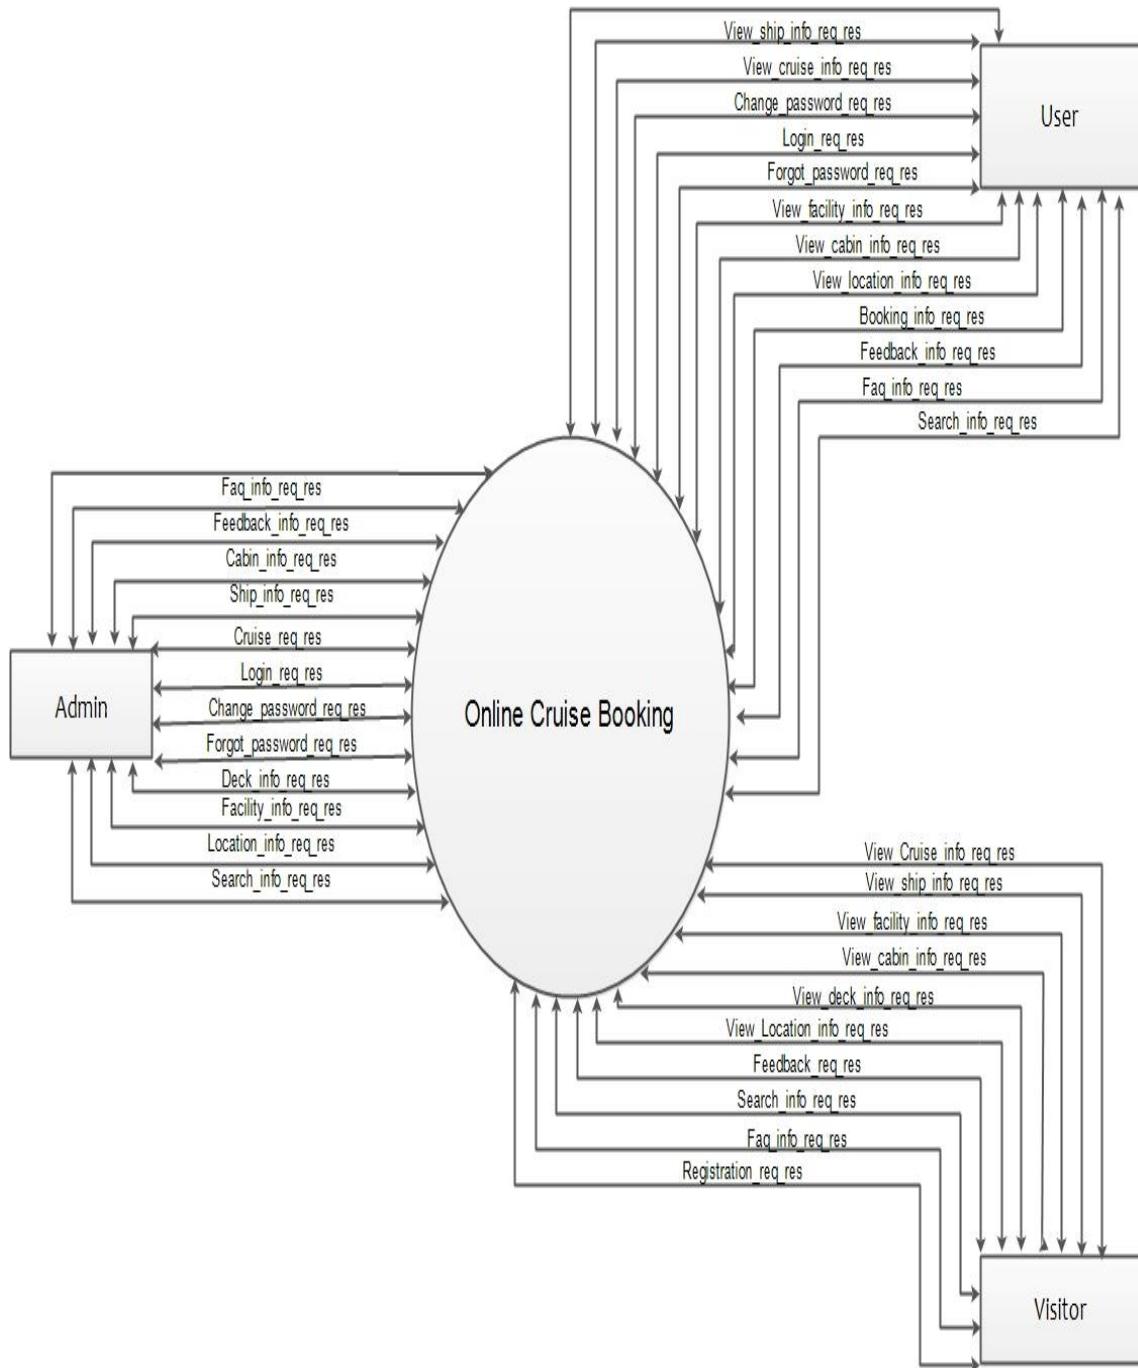

In the DFD diagram we define the flow of data and how the system data flow managed by grouping the data with the entity relationship. In this way we find out the need of the system and managed it in particular way by which we can easily access with the system.

By the use of DFD diagram all the complete data fellow is understood by the system analysis. Here in our DFD there is a once the patient is going for treatment the management of hospital first inform the patient that which kind of treatment is available and what kind of task is performed by the person and which kind of function should be implemented by the management person who is managing.

Table Structure

1.user_master

Field Name	Type	Constraint	Description
user_emailid	varchar(100)	primary key	It is for user email id.
password	varchar(100)	not null	It is for user password
first_name	varchar(100)	not null	It is for user first name.
middle_name	varchar(100)	not null	It is for user middle name
last_name	varchar(100)	not null	It is for user last name.
gender	varchar(50)	not null	It is for user gender
dob	date	not null	It is for date of birth
address	varchar(500)	not null	It is for user address
contactno	double	not null	It is for user contact no
countryid	int(10)	foreign key	It is for country id
stateid	int(10)	foreign key	It is for state id
cityid	int(10)	foreign key	It is for city id
user_profile	varchar(500)	not null	It is for image of user

2.cruise_master

Field Name	Type	Constraint	Description
cruiseid	int(10)	primary key	It is for cruise id
cruisename	varchar(100)	not null	It is for cruise name.
source_place	varchar(100)	not null	It is for source place.
destination_place	varchar(100)	not null	It is for destination place.
no_of_days	int(10)	not null	It is no of days.
trip_price	float	not null	It is for price of cruise
trip_date	date	not null	It is for date of cruise.
discount	double	null	It is for discount of cruise
shipid	int(10)	not null	It is for ship id
countryid	int(10)	foreign key	It is for country id
routeid	int(10)	foreign key	It is for route id.

3.cruise_image

Field Name	Type	Constraint	Description
cruise_imageid	int(10)	primary key	It is for cruise image id.
cruiseimage	text	not null	It is for name of image.
cruiseid	int(10)	foreign key	It is for cruise id

4.ship_master

Field Name	Type	Constraint	Description
shipid	int(10)	primary key	It is for ship id
shipname	varchar(150)	not null	It is for ship name.
shipdetails	varchar(500)	not null	It is for ship details.
source_place	varchar(150)	not null	It is for source place
destination_place	varchar(150)	not null	It is for destination place
trip_price	Float	not null	It is for trip price
trip_date	Date	not null	It is for trip date
no_of_passenger	int(10)	not null	It is for no of passenger.
routeid	int(10)	foreign key	It is for route id
shipcompany_id	int(11)	foreign key	It is for ship company id.
cruiseline	varchar(150)	not null	It is for cruises of ship

5.ship_image

Field Name	Type	Constraint	Description
shipimage_id	int(10)	primary key	It is for ship image id.
shipimage	varchar(500)	not null	It is for name of image.
shipid	int(10)	foreign key	It is for ship id

6.ship_company

Field Name	Type	Constraint	Description
shipcompany_id	int(10)	primary key	It is a shipcompany id.
shipcompany	varchar(250)	not null	It is for shipcompany name.
logo	varchar(500)	not null	It is logo of company

7.facility_master

Field Name	Type	Constraint	Description
facilityid	int(10)	primary key	It is for facility id
facilityname	varchar(100)	not null	It is for name of facilities
description	varchar(500)	not null	It is for description of facilities
Shipid	int(10)	foreign key	It is for ship id
cruiseid	int(10)	foreign key	It is for cruise id

8.facility_image

Field Name	Type	Constraint	Description
facility_imageid	int(10)	primary key	It is for facility image id.
facilityimage	varchar(500)	not null	It is for name of image.
facilityid	int(10)	foreign key	It is for facility id

9.cabin_master

Field Name	Type	Constraint	Description
cabinid	int(10)	primary key	It is for cabin id
cabintype	varchar(100)	not null	It is for different type of cabin.
price	float	not null	It is for price of cabin
cabinimage	varchar(500)	not null	It is for image of cabin
description	text	not null	It is for description of cabin
shipid	int(10)	foreign key	It is for ship id
cruiseid	int(10)	foreign key	It is for cruise id

10.deck_master

Field Name	Type	Constraint	Description
deckid	int(10)	primary key	It is for deck id.
deckname	varchar(50)	not null	It is for deck name
deckimage	varchar(500)	not null	It is for deck image
shipid	int(10)	foreign key	It is for ship id.

11.country_master

Field Name	Type	Constraint	Description
countryid	int(10)	primary key	It is a country id.
countryname	varchar(50)	not null	It is for country name.

12.route_master

Field Name	Type	Constraint	Description
routeid	int(10)	primary key	It is for route id.
routename	varchar(50)	not null	It is for route name.
countryid	int(10)	foreign key	It is for country id.

13.state_master

Field Name	Type	Constraint	Description
stateid	int(10)	primary key	It is for state id.
statename	varchar(100)	not null	It is for state name.
countryid	int(10)	foreign key	It is for country id.

14.city_master

Field Name	Type	Constraint	Description
cityid	int(10)	primary key	It is for city id.
cityname	varchar(100)	not null	It is for city name.
stateid	int(10)	foreign key	It is for state id.

15.booking_master

Field Name	Type	Constraint	Description
bookingid	int(10)	primary key	It is for booking id.
userid	Int(10)	not null	It is for user id.
shipid	int(10)	foreign key	It is for ship id.
cruiseid	int(10)	foreign key	It is for cruise id.
user_emailid	varchar(100)	foreign key	It is for user email id.
trip_date	date	not null	It is for date of ship
trip_price	float(20)	not null	It is for price of ship
no_of_days	int(10)	not null	It is days of ship
routeid	int(10)	not null	It is for routeid
booking_status	varchar(50)	not null	It is for booking status
booking_date	date	not null	It is for date of booking
total_amount	varchar(50)	not null	It is amount of booking
source	varchar(100)	not null	It is for source place
destination	varchar(100)	not null	It is for destination place

16.Feedback_master

Field Name	Type	Constraint	Description
feedbackid	int(10)	primary key	It is for ship feedback id.
rating_star	varchar(50)	not null	It is for rating star
comment	varchar(100)	not null	It is for comment
shipid	int(10)	foreign key	It is for ship id
user_emailid	varchar(100)	foreign key	It is for user id.

17.faq_master

Field Name	Type	Constraint	Description
faqid	int(10)	primary key	It is a faq id.
FAQ_question	varchar(250)	not null	It is for questions.
FAQ_answer	varchar(250)	null	It is for answer
emailid	varchar(50)	not null	It is for Email

18.admin_master

Field Name	Type	Constraint	Description
adminid	int(10)	primary key	It is for admin id
adminname	varchar(50)	not null	It is for admin name
emailid	varchar(100)	not null	It is for admin email id.
password	varchar(50)	not null	It is for user password.
mobilenno	double	not null	It is for mobile no
profile	varchar(500)	null	It is profile of admin

19.contact_master

Field Name	Type	Constraint	Description
contactid	int(10)	primary key	It is for contact id
firstname	varchar(50)	not null	It is for first name
user_emailid	varchar(50)	not null	It is for user email id.
middlename	varchar(50)	not null	It is for middle name
comment	varchar(50)	not null	It is for comment

20.cruise_cabin

Field Name	Type	Constraint	Description
cruise_cabinid	int(10)	primary key	It is for contact id
cruiseid	int(10)	foreign key	It is for cruise id.
shipid	int(10)	foreign key	It is for ship id.
cabinid	int(10)	foreign key	It is for cabin id.

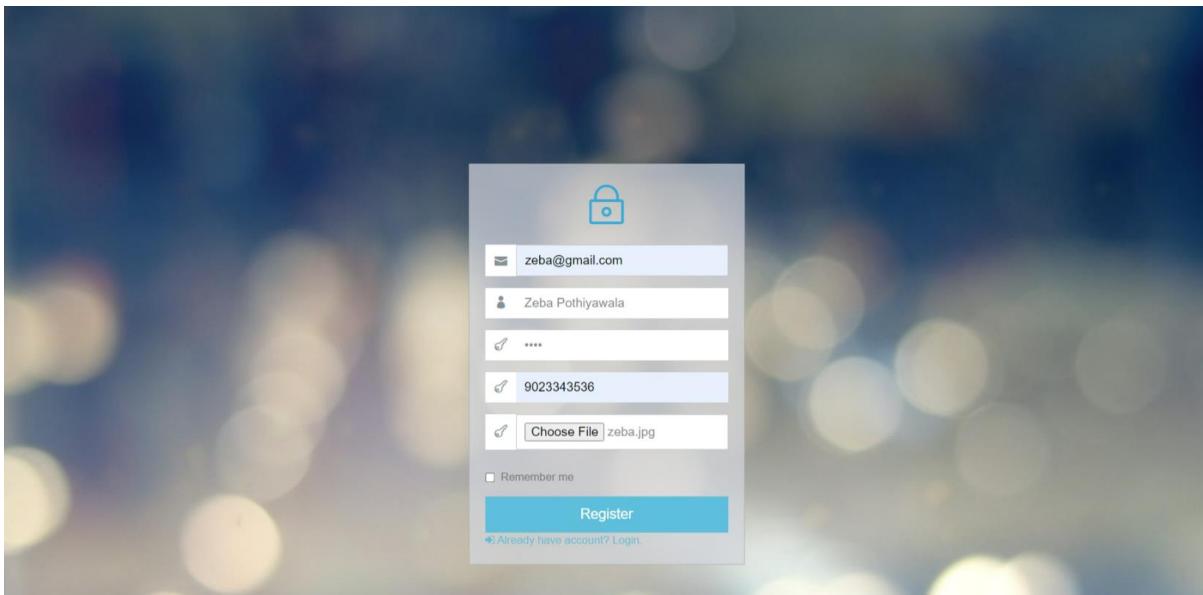

6. Design Report

6.1 Security Issues

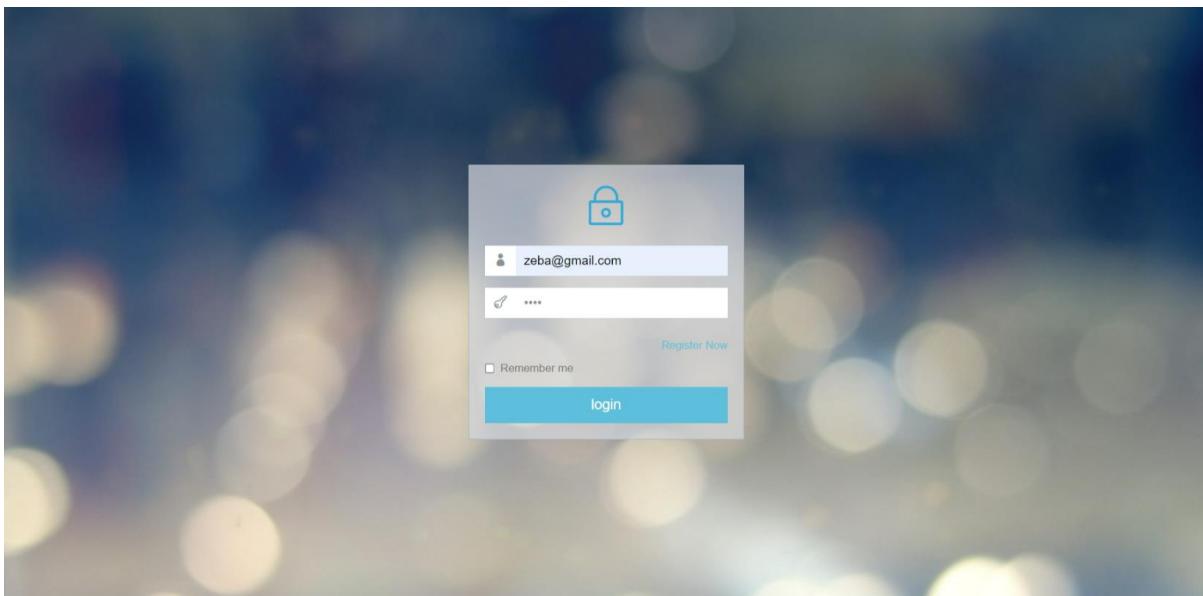

- ❖ Security remains primary concern for any system, enough care is taken to give authorized access the system.
- ❖ Only registered user can search for ship so unauthorized user will not be able to see registered information.
- ❖ Encryption and decryption are used to store password.
- ❖ Login is necessary to do the admin task.

6.2 Input Screen Layouts

❖ Registration (Admin)

❖ Login (Admin)

❖ Feedback (User)

The screenshot shows a feedback form on the website. At the top, there's a navigation bar with links: HOME, SHIP, CRUISES, FEEDBACK (which is highlighted in blue), ABOUT US, CONTACT US, and MY ACCOUNT. To the right of the navigation is a user profile picture of a woman named Miral Patel.

The main content area features a large image of a cruise ship at sea with the text "GET IN TOUCH" overlaid. Below this, there are two input fields: one for the email address "miralpatel567@gmail.com" and another for the subject "MSC Luxuria Ship".

Underneath these fields is a text area containing the message "Wonderful Trip ...".

On the right side of the form, there's a vertical "THEME OPTIONS" button. Below the message area, there's a section titled "RATING THE WEBSITE" with a 5-star rating icon. At the bottom of the form is a blue "SUBMIT COMMENT" button.

The screenshot shows a dark-themed news section on the website. At the top left is the Ocean Tour logo. Below it is a headline: "We love cruises, and we want everyone else to love them too!"

The news section features three articles:

- AMAZING PLACE** (May 18, 2017) - Image: A night view of a city skyline.
- AMAZING CRUISES** (JULY 08, 2017) - Image: A night view of a city skyline.
- AMAZING PLACE** (JUNE 14, 2017) - Image: A night view of a city skyline.

Below the news section are "TAGS:" with categories "Cruises" and "Ships".

The "CONTACT INFO" section includes:

- Royal arcade,
Opp.Sarathana Jakatanaka,
Surat
- +91 9396857478
- oceanTour@mail.com
- ot@world.com

At the bottom of the page is a copyright notice: "© 2023 All rights reserved. OCEAN TOUR CRUISE".

❖ Home (User)

The screenshot of the Ocean Tour website's homepage displays a large banner image of a cruise ship at sunset. The banner features the 'OCEAN TOUR' logo and a 'VIEW OUR TOURS' button. Below the banner is a search bar with fields for 'Route', 'Cruise Line', 'Ship Name', and 'Cruise Length', along with a 'SEARCH NOW' button. A sidebar on the right shows 'ROUTE SEARCH' and 'SEARCH'. The main content area is titled 'THE BEST SEA TOURS' and displays six thumbnail images of different cruise ships: M/S SEABOURN ENCORE, M/S CARNIVAL BREEZE, M/S NORWEGIAN BLISS, CROWN PRINCESS, M/S ADMIRAL, and M/S CELEBRITY MILLENNIUM. Each thumbnail includes a 'VIEW MORE' button. Below this section is another titled 'BEAUTIFUL TRIPS' showing a grid of nine images of cruise ships in various scenic locations, each labeled 'PROMOTIONAL TRIP'. The footer contains sections for 'TRAVEL NEWS' (with links to 'AMAZING PLACE MAY 15, 2017' and 'AMAZING CRUISES MAY 16, 2017'), 'TAGS' (Cruises, Ships), and 'CONTACT INFO' (Royal arcade, Okt Sarinah, Jakarta, Indonesia; +62 989857478; oceantour@mail.com; otc@world.com). The footer also includes a copyright notice: '© 2023 All rights reserved. OCEAN TOUR CRUISE'.

❖ Home (User After Login)

The screenshot displays the homepage of the Ocean Tour website after user login. The top navigation bar includes links for HOME, SHIP, CRUISES, FEEDBACK, ABOUT US, CONTACT US, MY ACCOUNT, and LOGOUT. A search bar at the top right allows users to search by Route, Cruise Line, Ship Name, and Cruise Length.

THE BEST SEA TOURS

Below this section, there are six thumbnail cards for different cruise ships:

- M/S SEABOURN ENCORE
- M/S CARNIVAL BREEZE
- M/S NORWEGIAN BLISE
- M/S CROWN PRINCESS
- M/S ADMIRAL
- M/S CELEBRITY MILLENIUM

BEAUTIFUL TRIPS

This section features a grid of nine promotional images showing various cruise ship destinations:

- PROMOTIONAL TRIP (sailing ship)
- PROMOTIONAL TRIP (cruise ship)
- PROMOTIONAL TRIP (cruise ship)
- PROMOTIONAL TRIP (Statue of Liberty)
- PROMOTIONAL TRIP (cruise ship)

FOOTER

The footer contains the following information:

- TRAVEL NEWS**: Includes links to "AMAZING PLACES MAY 10, 2017" and "AMAZING CRUISES MAY 10, 2017".
- TAGS**: Categories like "Cruises" and "Ships".
- CONTACT INFO**: Address "Royal streets, City Sarathana, Indonesia, East Asia", phone number "+62 309867478", email "oceantour@mail.com", and website "ocean@ocean.com".
- Copyright notice: "© 2023 All rights reserved. OCEAN TOUR CRUISE".

❖ Ship Searching (User)

Navigation bar: HOME, SHIP (highlighted), CRUISES, FEEDBACK, ABOUT US, CONTACT US, MY ACCOUNT, MIRAL PATEL.

Theme Options button: THEME OPTIONS

SHIPS section: A large image of a cruise ship deck with passengers. Below it is a search interface.

Inside

An inside cabin is a stateroom located in the centre of the ship, with no windows or balcony to the outside. Inside cabins offer no natural light and for that reason, they are cheaper than any other type of cruise cabin. There are four main cruise ship cabin types to choose from: Inside cabin has no windows or balcony.

❖ Booked All User

The screenshot displays five identical booking confirmation pages from the Ocean Tour website, arranged vertically. Each page shows a booking for a "SAILING VESSEL" named "KALUBHAI". The details include:

- CONTACT INFORMATION:** Name: KALUBHAI, Email: KALUBHAI@GMAIL.COM, Phone: +919876543210.
- TRAVEL DATE:** From: 2023-01-28, To: 2023-01-29.
- LOCATION:** From: BARODA, To: BARODA.
- ACCOMMODATION:** Double Room.
- MEALS:** Breakfast, Lunch, Dinner.
- EXTRA SERVICES:** None.
- BOOKING CONFIRMATION:** Includes a QR code and the message "THANK YOU FOR YOUR BOOKING WITH US. WE HOPE YOU ENJOY YOUR TRIP!"

❖ About Us (User)

ABOUT US

WE LOVE CRUISES, AND WE WANT EVERYONE ELSE TO LOVE THEM TOO!

WHO WE ARE?

At Seawise, we know that planning a vacation shouldn't be a chore. It should be fun! By utilizing the latest advances in technology, such as live pricing and availability, we've made it as easy as 1-2-3 to research, arrange, and book reservations online without any hassles.

Our philosophy is that your vacation starts from the minute you visit our site. That's why we have provided our customers with rich, inspiring content to help ease the decision making process. We also work with the best suppliers in the business to ensure that you will always get the lowest price for your cruise.

WHAT WE DO?

- First Class Cruises
- 5 Star Accommodations
- Inclusive Packages
- Safe & Secure Online Booking
- Best Prices
- World Class Service
- Online Focused Travel Agents
- Fair Prices and Policies
- Convenient Advice
- Directly to Your Dream Holiday

OUR TEAM

OUR CRUISE SPECIALIST

ALINA BOLLHORST
CRUISE CONSULTANT

Each ship is so individual and each cruise line has a different concept. I am very blessed to be able to visit further countries during my apprenticeship and to be able to collect many new experiences.

ANDREAS KOESTER-CLOBES
EXECUTIVE DIRECTOR

On board of the MS Europa 2 you can enjoy fantastic haute cuisine, and with the MS Silver Spirit you can set sail in an elegant way. Furthermore, I am an admirer of MSC Cruises, a cruise line combining well a good value for money.

ANDY SCHREITER
CRUISE CONSULTANT

My favorite cruise ship is AIDAcara. Here you can experience unique natural spectacles. Here you can for example the impressive sailing from Longyearbyen, Svalbard to Tromsø, Norway or the sailing from Oslo to Spitzbergen in the passage through the Norwegian fjords of the Lofoten - It is simply fantastic!

OUR SERVICES

WE ARE THE BEST

HAPPY CLIENTS
We are a travel agency specialized in cruises based in Ahrendorf, Germany. We have invested a lot into our website to make the cruise the finest cruises in the world available for convenient online bookings at affordable prices.

AMAZING TOUR
Our site is well organized and allows you to conveniently compare the offerings from different cruise lines. Our special focus is in showing only up-to-date prices and availabilities.

FAIR PRICE & POLICIES
The cruise prices on our website already include all taxes and fees and port charges. Fuel surcharges are either included in the amount mentioned directly with the voyage description.

COMPETENT ADVISE
Only real cruise experts are working with us. Each of our employees personally knows at least one cruise line ready to answer your questions and to find the ship that best suits your wishes.

countryid	Null	Invalid	Error

7.2 Testing Issues

❖ Software Testing

Software testing is a critical element of software quality assurance and represents the ultimate review of specification design and coding. Testing is an exposure of a system to trial input to see whether it produces correct output. Testing cannot be determined whether software meets user's needs, only whether it appears to confirm to requirements. Testing can show that a system is free of errors, only that it contains error. Testing finds errors, it does not correct errors. Software success is a quality product, on time and within cost. Though testing can reveal critical (costly) mistakes. Testing should therefore,

- Validate Performance.
- Detects Errors.
- Identify Inconsistencies.

❖ Test Objective

- There is strong evidence that effective requirement management leads to overall project cost savings. The three primary reasons for this are:
 - Requirement errors typically cost well over 10 times more to repair than other errors.
 - Requirement errors typically comprise over 40% of all errors in a software project.
 - Small reduction in the number of requirement errors pays big dividends in avoided rework costs and schedule delays.
- The testing procedure should care for all of these, as well as, in order to attain a flawless, error-free and efficient functioning system; too, software testing is an important phase of any software development life cycle. The system presented here is titled as "CodersZone.com". Various reports and data used for the same are the core of the system. The testing, therefore, becomes important in order to maintain the cost as well as improve performance and consistency. The testing procedure for the system has been divided in to various parts ranging for single unit testing to entire system testing.

❖ Test Planning

- Test planning evolves the following steps:
- Estimate the size and cost of the testing efforts.
- May allocate test resources.
- Schedule test activities in accord with other development work.
- Generate test cases

**❖ Generating Test Cases**

- A test case is a unit of testing activity. Test cases have three parts
- Goal- the aspect of the system being tested.
- Input and System State- data provided to the system under stated conditions.
- Expected Behavior- the output or action the system should take according to these requirements.

❖ Test Case Selection

- The presented system “CodersZone.com” is tested using white-box testing which is based on the internal structure of the system, may also called as testing to code, path-oriented testing, or logical-driven testing. A common goal of white-box testing is to have a test case to exercise every path through a program. This may become exhaustive.

❖ White Box Testing Case Selection

- Because exhaustive white-box testing is infeasible, test or code coverage metrics are used to select test cases, which measure the fraction of code exercised by test cases. Test cases are selected to achieve target test coverage levels.

❖ Test Coverage Metrics

- Statement Coverage: The fraction of statements executed at least once in running a collection of test cases.
- Branch Coverage: The fraction of total branch directions that have been taken at least once in running a collection of test cases.
- Path Coverage: The fraction of paths taken at least once in running a collection of test cases, where a “path” is defined in some way to limit the totals of feasible collection

❖ Unit Testing

- The presented system is tested first using unit testing. Unit testing is test of code written by a single programmer. A unit is a portion of a system implemented by a single programmer. Unit testing is exercising a unit in isolation from the rest of the system. The system, then, is tested using Integrating Testing.

**❖ Integration Testing**

- Top-Down: Combine, test and debug top-levelled routines that become the integration test that harms for lower-level units.
- Bottom-Up: Combine, test low-level routines into progressively larger modules and subsystems.
- Sandwich: Mainly top-down with bottom-up integration and testing applied to certain widely used components.

❖ Failure And Recovery

- The system is tested using sandwich testing so as it has integrated advantages of both the top-down integration as well as bottom-up integration testing.

❖ Advantages Of Using Top-Down Integration

- The top levels of the system are tested the most.
- Distributes integration and testing throughout the coding phase.
- Tends to make bug location easier.
- Minimizes test harms creation.

❖ Advantages Of Using Bottom-Up Integration

- Works well early in the integration process; thorough testing is possible and bugs are easy to be Found.

❖ Test Completion

- White-box test coverage targets are met.
- Rate of error discovery reduced the target value.
- Measured reliability of the system achieves its target value.

8. Limitations of System

- ❖ Advertisement module are not available (Contact to admin is needed to give advertisement).
- ❖ User can not show visual route map.

9. Future Enhancement of the System

- ❖ Advertisement module will be automatic.
- ❖ More security features will add.
- ❖ Visual route map will add.

**10. Justification of
MIS/DSS**

Cruise booking is management information system because,

- 1) It helps admin to manage different kinds of information of ship, cruise, deck, cabin.
- 2) Retrieval of information is very easy

MIS: -

- MIS is general term for the commercial system in an organization that assist the owner of the organization in management-oriented task and problem specific task and problem solving
- It helps in managing the data easily and also provides information when needed.
